D-COMPANY

D-Company is specialized for production of curing moulds for passenger, light truck, truck, agro industrial tires, bicycle, scooter, motorcycle.

Years of hard work, investment in human resources and machinery, and applying of modern methods in management and quality control are the principles of our business which keep our clients satisfied for full 29 years.

Until today, our production has been comprised of manufacturing moulds for pneumatic tyre of 10" up to 52" in different constructions (segmented, container, two piece), applying different methods for manufacturing the thread pattern (casting according to PA procedure, sand casting, kokila casting, direct milling in aluminum, direct milling in steel).

We are currently able to perform simultaneous 5 axis high speed milling on the parts up to the 2.5m diameter and to turn to the same diameter values. In our foundry we can cast aluminium segments or full rings for all kind of tyre moulds.

D-Company entered in tyre mould production business in 1991. At first we produced only steel parts for tyre moulds. In 1995 started production of complete moulds and in 2007 D-Company business system became ISO 9001 certified.

Our experience as well as our machine park give us the opportunity to respond to the most various requests of our current and future clients, and not only in the area of manufacturing moulds for rubber industries, but also in supplying technical solutions and performing demanding machining (milling, turning, wire and spark erosion, laser and plasma cutting, bending, welding...).

As a part of diversification philosophy in 2017 we entered on another market and started development of another business, hydro-electric power plants, providing manufacturing of turbine housings, inlet pipes, runners and additional mechanical parts for construction of hydro-power plants.

D-Company also produces steel pipes for pipelines - spiral welded in the range of Ø355-2032mm thickness 5-12mm and longitudinal welded pipes in the range of Ø450-3000mm, thickness 10-60mm.

For additional information, please check our website or send us an inquiry by e-mail.

Looking forward to prosperous cooperation.
